THink DWanaY: Memory made visible

Memory Approach

Workplace template before any research plan

THink DWanaY: Memory
made visble

Brain sequence

1. Brief description how it works
2. Broader context
3. Mind Map
4. Summary and Action Items

THink DWanay: Memory made visible

Introduction

We are applying the function of memory in a human brain to the actual workplace

The is guide template helps you follow a sequence that prepares you on how to view the data.

The encoding

The Storage

The retrieval

Memory made visible

1 The encoding.

2 The storage

3 The retrieval

Brief descriptions

1

The encoding.

This is where the dataset captures what people valued enough to act on.

1. ***What did they value?***
2. ***What did that value make them do?***
3. ***What did it cost them?***

2

The storage

Storage is not about keeping the data, but about what we keep paying to hold on to it.

1. ***What did we choose to keep?***
2. ***What did we choose to discard?***
3. ***What is that costing us now?***

3

The retrieval

This is how we view the goal and attempt. We don't retrieve what is true. We retrieve what we need to be true to act.

1. ***What are we trying to retrieve?***
2. ***What question brings it back?***
3. ***What will will we do with it once we find it?***

Mind Map

Let's begin!

Are you ready?

Topic: _Pick 10_

1

The encoding

What did they value?

What did that value make them do?

What did it cost them?

1. They value their interest and skills upon choosing future careers.

2. They also value the high paying salaries and or jobs.

3. They also value their strengths in the subject choices based on grade 9 results.

4. They can also value choosing subjects that their friends are doing so basically they value fitting in.

1. It makes the learner choose subjects that are closely aligned with their interests and skills because that's where their passion is.

2. It makes they choose careers that will give them a good standard of living.

3. They would avoid picking subjects they are not strong in.

4. It leads them choosing subjects that are miss aligned from their interest and skills.

1. It would cost them to make permanent subject choice decisions based on their interest but risk choosing wrong subjects that are not aligned with career choice that are closely aligned to their interests and skills.

2. They would choose jobs either opposite of their skills just because its a high paying job. Leading them to value money and not passion.

3. This could cost them to choose subjects that are easier for them but not leading to the required subjects for a standard career.

4. They would have to settle for a career that has the subjects they choose even when their interests and skilled are not aligned with that choice.

Topic: Pick 10

2

The Storage

What did we choose to keep?

1. Records for mixed subjects choices that often miss lead learners

What did we choose to discard?

1. We discarded their reason behind their choices.

2. We discarded the fact that some learners need guidance

What is that costing us now?

1. Learners are not accepted into universities and them not being able to find suitable jobs.

2. Learners will be struggling with certain subjects therefore decreasing the passing rate in Dawnview High , impacting the public image of Dawnview High School

Topic: Pick 10 _____

3

The retrieval

What are we trying to retrieve?

1. The interest and habits and skills that align with a certain career choice and what are the recommended subjects for them.

What question brings it back?

1. What interests, personality, habit and skills are closely aligned with certain careers?

2. What careers are in demand?

What will we do with it once we find it?

1. It will let train our model and be very useful for the recommendation system to be more accurate.

2. To not recommend outdated careers that are no longer in demand.
